Future prospects for "Medical Technology"

After the weak past few years, demand for medical technology in Russia is picking up again. The industry is benefiting from increasing investments in the health sector. More than EUR 40 billion will be invested in new clinics and other medical equipment this year. Analysts of the management consultancy KPMG even expect public spending of around EUR 48 billion this year (+10 per cent compared to 2017), which corresponds to a share of around 3.6 per cent of the GDP. The government wants to tighten import substitution in medical technology, which should make market access more difficult for international companies. The private health sector and telemedicine offer new and promising business opportunities.
