Economic data for Thailand

Future prospects for “Medical Technology”

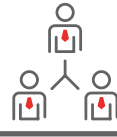

Recently, the market for medical technology reached a volume of USD 1.4 billion and is expected to grow by between 8 and 9 per cent during the next two years. The government is supporting this development with a strategic 10-year plan until 2025, which is intended to further enhance Thailand’s significance as a “hub of wellness and medical services” in the region. Although the public sector accounts for the largest share of demand (around 55 per cent), the numerous private specialist clinics are more likely to invest in state-of-the-art technology and thus shape the growth profile.
